

Response to RFP: Lead Partner/ Consortium for 10 Year Celebration

Proposed Scope of Services

Prepared for: Tenure Facility

March 2026

EXPRESSION OF INTEREST & OUTLINE

Dear Tenure Facility Team,

Thank you for the opportunity to submit a proposal for this extraordinary milestone. The vision you describe to elevate Indigenous and community voices and advance the land tenure movement within global audiences through storytelling deeply resonates with who we are and why Chaski Global exists.

Far before co-founding Chaski Global, I was born and raised in La Paz, Bolivia. My grandfather was Quechua, and the language and worldview of Indigenous communities were part of my daily life growing up. That foundation shaped how I understand land, culture, stewardship, and collective responsibility.

As a teenager, I worked with my father on a documentary about the Afro-Bolivian communities of the Yungas. That early experience led me to pursue an Indigenous perspectives comparative study abroad where I had the privilege of living with the Zapatistas in Mexico, the Māori in New Zealand, the Wampanoag in Massachusetts, and the Warli communities in India. Those experiences profoundly shaped my understanding of how Indigenous knowledge systems protect land, culture, and biodiversity, and how often these stories remain invisible to the wider world.

Chaski Global was born from that understanding. Our name honors the Chaski, the Incan messengers who carried knowledge across the Andes and throughout the Incan empire. Like them, our work is about respectfully and powerfully carrying stories across communities and audiences.

This project feels deeply aligned with our mission. For over a decade, Chaski has worked globally to translate complex impact into human-centered storytelling through film, digital experiences, visual narratives, and strategic communications.

Our team combines creative direction, multimedia production, data visualization, digital platform development, and global partnership management. We also collaborate with youth networks and cultural creators around the world who help

ensure stories are told with authenticity and energy that resonates with new generations.

What inspires us most about Tenure Facility's vision is its commitment to showing the world something many Indigenous communities have always known: that land stewardship, biodiversity protection, and climate resilience are inseparable from Indigenous leadership and collective rights.

We would be honored to help bring this story to life. Our approach will focus on creating a narrative ecosystem combining immersive storytelling, interactive mapping and digital platforms, filmmaking through participatory methods with the communities, data visualization, and artistic collaboration.

Our aim is to help make clear the scale, humanity, and global significance of the movement Tenure Facility has helped advance over the past decade, while ensuring that the process itself reflects the values of the work: community-led storytelling, deep listening, ethical representation, and collaborative creation with Indigenous and Afrodescendant partners.

This milestone represents far more than an anniversary. It is an opportunity to demonstrate how land rights movements are shaping the future of climate, biodiversity, and cultural survival.

Thank you for considering our proposal. We would approach this work with great care, humility, and creativity, and we sincerely look forward to the possibility of partnering with you to tell this important story.

All correspondence regarding contract negotiation should be sent to Valeria McFarren at valeria@chaskiglobal.com.

With Respect and Admiration,

A handwritten signature in dark ink, appearing to read 'V. McFarren', with a stylized flourish at the end.

Valeria McFarren

Proposal Outline

Our response to the RFP is organized accordingly:

1. High-Level Proposal
 - 1.1. Objective Statement
 - 1.2. Creative Concept
 - 1.2.1. Key Creative Deliverables
 - 1.3. Strategic Framework
 - 1.3.1. Campaign System Overview
 - 1.3.2. Theory of Change & Audience Engagement
 - 1.3.3. Distribution: How Content Moves
 - 1.3.4. Community Amplification: Key Tactics for Indigenous Amplification
 - 1.4. Timeline
 - 1.4.1. 2026
 - 1.4.2. 2027
 - 1.4.3. 2028 & Beyond
2. Our Approach
 - 2.1. Participatory Methods
 - 2.2. Project Management & Governance
 - 2.3. Monitoring & Evaluation
3. Experience of the Consortium
 - 3.1. Member Descriptions
 - 3.2. Experience
4. Pricing Proposal
 - 4.1. Confirmed Budget
 - 4.2. Notes
5. Appendix
 - 5.1. Chaski Global Portfolio
 - 5.2. Consortium Resumes
 - 5.3. U.S. Small-Woman Owned Business Confirmation Letter

I. HIGH-LEVEL PROJECT PROPOSAL

1.1 Objective

The work of the past decade deserves to be seen, felt, and built upon. Our approach to this project is developed under the working concept “*Rooted*”, and begins from a simple truth: that the land rights movement is, at its core, a story about the deep, generational bond between people and place. A bond that was always there, that communities have always honored, and that the Tenure Facility has spent ten years giving the legal force it deserves.

Rooted is designed to make that bond visible through data, human voice, art, and interactive experience. We see a huge opportunity to build on the creative potential of the communities you have been directly supporting to build something that goes beyond just celebrating the progress and showcasing the work, but instead to create a digital platform and interactive exhibit that directly allows the communities to tell their own stories.

Operationally, this project will deliver three core outputs: (1) a global digital platform, (2) a structured film and content package, and (3) a modular immersive installation. All are built from a shared foundation of multimedia content developed directly with communities, which is then adapted across formats—interactive platform experiences, cinematic and short-form storytelling, and spatial, sensory installations

To bring this vision to life from the first page of this proposal, our team has built an interactive prototype drawing on data and storytelling from the 2024 Annual Report, in a hope to demonstrate both our technical capabilities and the creative experience at the heart of “*Rooted*”. We invite you to explore it alongside this document: <https://chaskiglobal.vercel.app/>

1.2 Creative Concept

[Explore the concept digitally here: <https://chaskiglobal.vercel.app/creative-pitch>]

Rooted.

A hundred-year-old tree did not arrive at its age alone. Long before the seed found the ground, a fungal network was already threading through the soil, carrying nutrients, building connections, preparing conditions that the seed itself could never have created. When the sapling germinated, older trees stood above it, their canopies breaking the force of wind and weather, their roots loosening the earth. And when we find that tree a century later and read its rings, we are not reading the story of a single tree, but instead the story of an entire ecosystem.

Building on the strong imagery of previous storytelling activities, we propose centering Tenure Facility's 10 year celebration through the concept "Rooted". The Tenure Facility, its partners, its funders, and the broader solidarity infrastructure of the movement are the mycelial network of the forest in this metaphor; working to support the redistribution of resources between trees – in this case the various indigenous, Afro-indigenous, and local communities.

The narrative architecture of *Rooted* is structured into three key components:

Rooted in Relation will serve as a gathering of Indigenous, Afrodescendant, and local community cosmologies, knowledge systems, and ways of being, in order to surface the deep commonalities across cultures and continents that have always positioned these communities as the world's most effective land stewards.

Rooting for Change Showing ten years of data, testimony, and collective achievement told through the rings of the decade, showing the scale of what has been secured, protected, and strengthened made visible and human simultaneously. This is the evidence movement: proof that ancient wisdom, when resourced and legally protected, produces measurable, documented, irreversible change.

Roots of Abundance will demonstrate a rooted imagination of the world these communities and the Tenure Facility are actively working to realize, drawn from the ontologies of the first movement and grounded in the evidence of the second.

1.2.1 Key Creative Deliverables

1. The Living Map & Digital Platform

First, please see the example platform built here using the information from the Tenure Facility's 2024 Annual Report: <https://chaskiglobal.vercel.app/tenure-facility>. This prototype

demonstrates some of the technologies and technical capacity the team would use to implement the larger vision for the digital platform.

The proposed Living Map will serve as the core digital infrastructure of the campaign: an interactive platform that integrates geospatial data, multimedia storytelling, and community-generated content into a single, scalable system. It is designed to enable users to explore Tenure Facility's impact across geographies and over time, connecting quantitative evidence with on-the-ground realities in a way that is both analytically clear and experientially engaging.

At its foundation is a shared library of multimedia content developed directly with and by communities through field production and partner contributions. This includes filmed interviews, personal testimonies, environmental soundscapes, photography, and visual imagery. These assets form the core material of the platform and are deployed across three integrated modules that together provide geographic navigation, data exploration, and guided storytelling.

A. Interactive Geospatial Map

The first module is an interactive geospatial map that allows users to navigate Tenure Facility's work spatially, moving from a global overview into specific countries, territories, and project sites. The map integrates layered datasets combining Tenure Facility project locations with broader environmental and climate data, including forest cover, biodiversity indicators, and protected areas drawn from sources such as Global Forest Watch, FAO, and UNEP-WCMC. Within this interface, each location includes embedded story hotspots that connect place-based data with lived experience through short video segments, audio recordings such as interviews and environmental soundscapes, and photographic and visual content provided directly by communities, in a living visual map of communities and their forests. Users can filter and explore the map by region, ecosystem type, project type, and impact category, including land secured and other integrated outputs.

B. Data Visualization & Exploration Layer

The second module is a data visualization and exploration layer that translates ten years of impact into an interactive visual system. Rather than a conventional dashboard, this layer is designed to make scale and change legible through dynamic representations of key indicators such as hectares secured, communities supported, and ecosystem coverage. A time-based interface spanning 2016 to 2026 allows users to explore how these indicators evolve over time. One core visualization within this layer represents global forest systems as scaled and animated entities, showing patterns of loss, protection, and tenure intervention, and enabling users to move fluidly between macro-level trends and specific project-level contexts. This module is intended to support both public engagement and more analytical use by donors, policymakers, and partners.

C. Experiential “Forest of Voices” Layer

The third module is the experiential “Forest of Voices” layer, which provides a guided narrative mode aligned with the three movements of the campaign. In this mode, users move through a structured sequence of curated sections, each combining audio, video, and visual content developed with communities. The emphasis here is on immersion and coherence rather than open exploration, creating a continuous narrative journey that conveys the cultural, ecological, and lived dimensions of land stewardship. This layer extends the physical installation into a digital format, ensuring that the experiential component of the campaign remains globally accessible beyond the anniversary event.

Technical Architecture

Technically, the platform will be implemented using scalable, open-source web technologies. The frontend will be built in React, with D3.js used for data visualization and Mapbox GL or MapLibre for geospatial rendering. More advanced visual interfaces, including animated ecological systems, will be supported through WebGL-based frameworks such as Three.js to ensure performance at scale. Content and metadata will be managed through a lightweight content management system such as Strapi or Sanity, while cloud-based hosting infrastructure with CDN delivery will ensure reliable global access.

The platform is built as a living archive that can grow beyond the 10-year project as an infrastructure that communities and partners can contribute to, and that will carry the movement's story forward beyond 2027. Our digital platform leads Ben Keller and Mitchell Tijerina maintain both technical expertise in data visualization & digital platform development, and Indigenous GIS through interactive mapping principles, as well as a decade of experience creating and maintaining trusted relationships with Indigenous and Afrodescendent communities. This unique combination of skill will ensure that the final product will be technically innovative with room to grow and expand as the land tenure rights movement evolves.

2. The Celebratory Film & Digital Shorts

The rings read aloud.

Logline: Across five continents, Indigenous, Afrodescendant, and local communities have always known what the world is only beginning to understand: that the land does not belong to them — they belong to it. *Rooted* is the story of a decade that gave that knowledge the legal force it deserves, told in the voices of the people who lived it.

Synopsis: *Rooted* is an approx. 20–30 minute documentary structured around the three movements of the campaign. It is built from intimate community vignettes. The film will feature 3 specific stories in countries across the 3 regions Tenure Facility works in (Africa, Asia, and Latin America), with stories selected to capture the different dimensions of impact. The

narrative will be built entirely through interviews with community leaders and forest stewards, in local languages, all with a focus on cinematic production value. Community collaboration will be structured through local partners and consultants engaged in each production location, supporting story selection, content development, and validation processes.

In the first movement, the film enters the ontological world of each community: the cosmologies, knowledge systems, and ways of being that define their relationship to the land, and that have sustained some of the world's most biodiverse and carbon-rich ecosystems for generations. In the second, those same communities are shown in their struggle and their achievement — how legal recognition of their rights, supported by the Tenure Facility and its partners, has translated into concrete, documented change: territories protected, governance strengthened, biodiversity outcomes measured, livelihoods sustained. In the third, the communities speak in their own voices about the future they are actively working to make real, in the terms of their own knowledge systems and values.

From the film, a suite of short-form content is produced in parallel: community vignettes distilled to their most essential and shareable form, data stories, portraits, and testimonies optimized for social platforms. Each short is designed to travel independently, carrying the full philosophical and emotional weight of *Rooted* to multiple audiences and drawing them toward the platform and the broader campaign. Given the way media is currently consumed, these short form content are likely to actually be the primary form of consumption of the film, beyond the initial film showing during the anniversary event, so this format alongside the broader communications campaign will be central in the design for the filmmaking and direction.

3. The Immersive Experience & Anniversary Event

Walking into the tree.

The immersive experience is the “*Forest of Voices*”, the sensory and emotional culmination of *Rooted* — a multi-ring installation, structured like the cross-section of an ancient tree, that takes visitors through the movements of the project in physical space. Each ring will present a tableau of visual and sonic media collected from the communities.

The immersive experience, The Forest of Voices, forms the sensory and emotional center of *Rooted*. It is designed as a spatial installation that visitors move through, unfolding as a journey across time, territory, and community voice. Inspired by the cross-section of a tree, the experience is organized into layered environments that reflect different dimensions of land, life, and stewardship.

As visitors progress through the space, they encounter a series of interconnected layers that move from deep histories and long-standing relationships with land, through present-day

realities, and into forward-looking visions shaped by communities themselves. Developed in deep collaboration with an artist with dedicated expertise in immersive practice, and guided at every stage by community consultants the communities whose realities it recreates, the experience is authored from the inside out. Community consultants guide the sensory, spiritual, and ecological dimensions of each ring — what the land sounds like, feels like, means in ceremony and in daily life.

Sound anchors the experience. A distributed spatial audio system creates a landscape of voices, where stories, testimonies, and environmental recordings emerge in specific zones throughout the installation. Audio is localized so that multiple narratives can exist within the same space without overlap, allowing visitors to navigate between them simply by moving. Voices, soundscapes, and moments of stillness shape the rhythm of the journey and give each area its own identity.

Visual elements are layered into the environment including filmed interviews, environmental footage, and visual documentation. Data visualizations from the digital platforms selectively within the space, integrated into the visual environment in ways that are legible without interrupting the flow of the experience.

The immersive experience anchors the 10-year anniversary convening. Guests enter the installation before any formal programming. The film then premieres in its director's cut, followed by a conversation with filmmakers and community voices. Facilitated donor engagement and policy dialogue sessions follow immediately, converting the emotional investment of the encounter into commitment. The movement convenes, and for this moment, the forest is visible all at once.

Note: This proposal does not include a full scope for hosting the 10 year anniversary event itself.

1.3 Multimedia Strategic Framework

1.3.1 Campaign System Overview

Rooted operates as an integrated campaign system across two years — a production and build year in 2026 and a launch and rollout year in 2027. Three core deliverables work together across the narrative architecture of the three movements — Rooted in Relation, Rooting for Change, and Roots of Abundance to ensure the campaign tells one coherent story.

Permanent infrastructure	Broadest reach vehicle	Singular conversion moment
The Living Map & Digital Platform The living archive and experiential destination that every other touchpoint ultimately points toward. Built to grow beyond 2027 as communities contribute their own stories, data, and voices.	The Celebratory Film & Shorts The feature film moves through all three movements. Short-form content travels through social, cultural, and community channels, reaching audiences that no institutional communication can access.	The Immersive Experience & Anniversary Event A one-time, unrepeatable physical installation at the anniversary convening. Its sensory and experiential reach extends permanently through the platform's multi-sensory layer.

The Three Movements

The three movements organize the content across all deliverables and channels:

Movement 01 <i>Rooted in Relation</i> Indigenous cosmologies, knowledge systems, and ways of being. Leads the teaser and pre-launch phase.	Movement 02 <i>Rooting for Change</i> Ten years of data, testimony, and collective achievement. Leads the launch phase and the retrospective heart of the film.	Movement 03 <i>Roots of Abundance</i> The generative vision of the world the movement is actively building. Leads the sustained momentum phase and the campaign's mobilization push.
--	---	--

Strategic Objectives

Rooted is designed to serve all four of the Tenure Facility's strategic objectives simultaneously and continuously.

#	Objective	As stated by the Tenure Facility
3.1	Demonstrate impact & amplify partners	Tell the story of 10 years of progress through human-centred storytelling. Make the scale and depth of the movement visible. Highlight the collective contributions of Indigenous Peoples, community organisations, governments, and funders.
3.2	Mobilise support	Use the 10-year milestone as a rallying point for new and renewed donor commitments, strategic partnerships, and long-term investment in land rights. Position land tenure as a frontline climate and biodiversity solution.

3.3	Engage & inspire new audiences	Reach audiences beyond traditional policy and donor circles, including youth climate activists, artists and cultural leaders, digital natives and tech communities, impact investors and philanthropies, and global and regional media.
3.4	Strengthen collective identity	Centre Indigenous, Afrodescendant, and community voices throughout. Celebrate land rights as a global movement for climate resilience, biodiversity protection, and cultural survival. Emphasise the message of solidarity across the collective.

1.3.2 Theory of Change & Audience Engagement

Objectives: 3.2 — Mobilise support · 3.3 — Engage & inspire new audiences · 3.4 — Strengthen collective identity

Rooted is built on a single strategic conviction: that systemic support for Indigenous land rights must be won through *encounter*. People do not change their relationship to a cause because they read a report or watched a video. They change it because something got inside them — because they felt the weight of what is at stake, and found themselves unable to look away.

The campaign is therefore designed as a journey from awareness to encounter to action with each touchpoint building depth of engagement, and each deliverable doing a distinct job in moving audiences closer to the moment of commitment. The film casts wide, reaching audiences who have never heard of tenure rights and giving them a reason to care. The digital platform goes deep, turning that initial interest into genuine understanding through data, story, and immersive experience. The immersive experience that supports the anniversary convening catalyzes by putting the people whose mobilization is essential to creating and sustaining systemic support for Indigenous knowledge systems in a room where the full force of the movement's story can reach them in its most powerful form.

This is the theory of change that underlies every structural decision in Rooted: that the path from indifference to action runs through beauty, specificity, and human truth.

01 First encounter	02 Goes deeper	03 The encounter	04 Action
Short-form content, press coverage, or partner referral creates first awareness of the campaign and the movement's scale.	Platform exploration — data, community stories, interactive map, experiential territorial encounters — builds understanding and emotional investment.	The immersive experience at the anniversary convening — singular and unrepeatable — creates emotional and sensory memory that no document or screen can replicate.	Facilitated donor engagement and policy dialogue sessions immediately follow the immersive experience — converting emotional investment into commitment.

Priority Audiences

The table below maps each priority audience to their specific entry point, engagement mechanic, and intended action. Indigenous Peoples, Afrodescendant Peoples, and local communities are listed first — not as one audience among many, but as the foundation without whom this campaign does not exist.

Audience	Entry point & role	Primary format	Engagement mechanic	Intended action
Indigenous, Afrodescendant & local communities	Co-creators, resource gatherers, and story owners — the campaign is built with and through them, not delivered to them	All deliverables — communities shape the film, guide the immersive experience, and own the platform's living archive	Deep consultation and co-creation throughout production; stories return home in local languages; communities define what meaningful local activation looks like for their context	Contribute to platform; share within community networks; lead local activation on their own terms
Existing donors & funders	Immersive experience at anniversary convening	Immersive installation, platform deep-dive, film premiere	Physical immersion in the story before facilitated donor engagement programming; platform as permanent evidence base	Renew or deepen financial commitment; become movement ambassadors
Prospective donors &	Short-form content or press	Platform data stories and	Platform presents decade of data as investment case with	First commitment; partnership

impact investors	coverage → platform	experiential layer, film	experiential community encounters; immersive experience at convening creates conversion moment	conversation initiated
Youth climate activists	Short-form social content — TikTok, Instagram Reels, YouTube Shorts	Film shorts, community testimony clips, data story reels	Platform-optimized clips per channel; youth and community voices centered to drive peer sharing; platform experiential layer as follow-on destination	Share content; explore platform; advocate for land rights in their own networks
Artists & cultural leaders	Immersive experience at anniversary convening; film premiere	Documentary film, immersive installation, platform experiential layer	Convening brings artists into the story physically; filmmaker dialogue creates community; platform's multi-sensory layer extends that encounter digitally	Create responsive work; amplify through cultural networks; share the campaign
Policymakers & governments	Immersive experience at anniversary convening	Immersive installation, platform data layer, policy briefs from platform	Installation creates emotional memory; facilitated policy dialogue immediately follows; platform data cited in policy conversations	Policy commitment; legislative support; public endorsement of land rights agenda
Global & regional media	Press screenings; embargo releases; platform as reference infrastructure	Film, platform data and experiential layer, community testimony	Journalist screenings ahead of launch; data and story embeds built into platform for easy citation; regional media partnerships for localized coverage	Feature coverage; ongoing platform citation; amplification of community voices

Digital native & tech communities	Platform interactive and experiential experience; social data stories	Living map, data visualizations, multi-sensory platform layer	Self-directed exploration of the map and experiential territories; shareable visualizations designed for digital-native formats; open data tools for developer community	Explore and share platform; build on open data; amplify through tech networks
--	---	---	--	---

1.3.3 Distribution: How Content Moves

Objectives: 3.1 — Demonstrate impact & amplify partners · 3.2 — Mobilise support · 3.3 — Engage & inspire new audiences

The three movements — *Rooted in Relation*, *Rooting for Change*, and *Roots of Abundance* — organize what content is produced, in what register, and at what moment in the campaign calendar. Three distribution channels — institutional, cultural and media, and social and digital — determine how that content reaches each audience. A community vignette rooted in Indigenous cosmology (*Rooted in Relation*) might travel through social platforms as a short clip, be embedded in the platform's experiential layer, and be screened at a regional conference — the same story, moving through all three channels simultaneously. Every piece of content sits inside a movement and travels through one or more channels. The two axes work together rather than as alternatives — the movements give content its meaning and sequence, the channels give it its reach.

Channel 01 — Institutional	Channel 02 — Cultural & Media	Channel 03 — Social & Digital
- Platform as owned hub and primary reference infrastructure for all institutional audiences - Partner organization networks distribute toolkits and localized content - Funder communications channels carry campaign assets to donor networks - Policy briefs and data reports drawn from	- Global and regional press driven by journalist screenings and embargo strategy - Director's cut film premiere at anniversary convening - Documentary festival circuit — international and regional — planned for 2028 - Regional conference screenings and campaign presentations	- Instagram Reels and TikTok — community portrait and landscape clips for youth audiences - YouTube Shorts and long-form — data stories and extended community testimony - LinkedIn — impact data and movement updates for donor and policy audiences - Platform shareable embeds — experiential

platform distributed at convenings Email and newsletter campaigns to existing Tenure Facility networks	Regional media partnerships drive localized coverage waves post-launch	and data visualizations built for social sharing X/Threads — media and policy conversation amplification
---	--	---

The digital platform as permanent experiential destination

The platform's multi-sensory experiential layer — community-guided sound landscapes, visual environments, and territorial encounters — serves as the permanent, globally accessible counterpart to the physical immersive experience. Where the installation offers a singular unrepeatable moment at the anniversary convening, the platform offers that encounter to anyone, anywhere, at any time. Every distribution channel ultimately points here: the place where audiences go deeper, stay longer, and return to as the movement continues to grow.

1.3.4 Community Prioritization Amplification: Key Tactics

Objectives: 3.1 — Demonstrate impact & amplify partners · 3.3 — Engage & inspire new audiences · 3.4 — Strengthen collective identity

The communities at the heart of *Rooted* are its most essential and most powerful distribution channel. The land rights movement does not live in policy briefs or donor reports. It lives in the territories, the governance systems, the daily practices, and the intergenerational knowledge of the Indigenous, Afrodescendant, and local communities who have always been its protagonists. For *Rooted* to fulfill its purpose, the campaign must travel back to the people it came from — not as an afterthought, but as an act of reciprocity as essential to the campaign's integrity as any global launch moment. This community amplification strategy operates in parallel with the platform launch and anniversary convening, ensuring the campaign is equally alive in the territories where the work happens — in the languages communities speak, through the channels they use, and on terms they define for themselves.

Localized content packages Short-form clips, social assets, and platform content produced in local languages and adapted for the specific cultural and digital contexts of each community partner. Distributed with simple sharing tools so communities can activate independently without requiring additional technical capacity.	Community screening program A structured toolkit — film, facilitated discussion guides, and locally adapted materials — provides the foundation for community-hosted screenings. What a meaningful screening program looks like is defined by each community, not by the campaign. Dedicated in-country and community budgets, separate from the core campaign budget, are recommended to support local activation in
--	--

<i>Mechanic: Asset packages distributed to community partners at campaign launch. Will employ community members/leaders in creation, translation, implementation of their specific packages.</i>	ways that are appropriate, sustainable, and self-determined. <i>Mechanic: Toolkit distributed ahead of launch; communities define their own activation approach; stories fed back to platform.</i> <i>Note: In-country and community screening budgets should be scoped and allocated separately</i>
Platform contribution portal Communities add their own stories, data, photographs, and testimony to the living archive — transforming the platform from a product the Tenure Facility built into infrastructure the movement owns. Each contribution expands the platform's reach and gives communities a reason to share it within their own networks. <i>Mechanic: Contribution portal opens at launch; community partners onboarded with simple submission tools.</i>	Regional conference presence Rather than a separate physical activation program, the campaign's regional reach is achieved through the Tenure Facility and its partners' existing presence at regional conferences — land rights convenings, climate summits, biodiversity forums, and development conferences — where the film can be screened, the platform demonstrated, and the campaign's story shared with audiences already engaged in the movement. <i>Mechanic: Conference screening and presentation kits distributed to partner organizations for use at relevant regional events.</i>

1.4 Timeline

1.4.1 — Production & Build (2026)

2026 is the year everything is built — stories gathered, the platform constructed, the film shot and edited, the immersive experience designed with community guidance. Given the RFP timeline, Q1 is compressed: concept development, consortium confirmation, and community consultation protocols run in parallel with the earliest story collection and data gathering work. Every deliverable draws from the same pool of field production assets — footage, community testimony, data, and audio gathered during filming feeds the platform, the immersive experience, and the short-form social content simultaneously. No asset is produced for a single purpose. Additionally, consortium partners bring existing relationships with communities across the Tenure Facility's geographies and may hold footage and materials that, subject to appropriate agreements and community consent, could enrich the project from the outset. We also hope to delve into Tenure Facility archival footage to repurpose existing content.

Q1 — Foundation	Q2 — Gathering	Q3 — Build	Q4 — Finalize
Concept & narrative Finalize Rooted framework, three movements, and narrative architecture Consortium confirmed Roles, responsibilities, and community consultation protocols established Early story gathering First community conversations and field research begins in parallel with concept finalization Media Research Identify ideal media collaborators, including traditional and legacy media, social influencers, podcasts, blogs, etc.	Field production Story collection and filming across regions with community consent and co-creation Data compilation Decade impact data gathered; platform architecture and UX design begins Platform prototype Interactive map and experiential layer prototyping begins Teaser assets Early footage and community voice clips shaped into anticipation content	Post-production Film editing begins; immersive experience design developed with community consultants Platform beta Interactive map and experiential layer in beta testing with community and partner review Immersive design Installation concept and spatial design finalized with community guidance Event planning Anniversary convening venue, programming, and guest strategy confirmed	Film & platform Film near-locked; platform finalized with full experiential and data layers Immersive build Installation design complete; fabrication and build begins Toolkits Community and partner toolkits produced and distributed for pre-launch sharing Teaser launch Public teaser campaign releases; press briefings begin under embargo

1.4.2 Launch & Rollout: 2027

2027 is the year Rooted meets the world. The campaign builds in two distinct peaks: a public platform launch in Q2 that opens the campaign to global audiences and drives momentum toward the anniversary convening, and the convening itself in Q3/Q4 — the singular, high-stakes cultural moment where the film premieres, the immersive experience opens, and the movement's most important donors, policymakers, and partners come together to celebrate a decade of progress and commit to the decade ahead.

Localized content packages	Short clips by movement	Community network seeding
Produced in local languages, adapted for each community's cultural and digital context. Distributed with simple sharing tools so communities can activate independently.	Rooted in Relation, Rooting for Change, and Roots of Abundance each represented in short-form. Every clip carries the full arc of the campaign in distilled form.	Community partners share through their own networks ahead of the public launch — building anticipation from the ground up rather than from the top down.

The platform launch — First public moment (Q2 2027)

The Living Map & Digital Platform launches publicly in Q2 2027 — the campaign's first major public moment and the opening of *Rooted* to global audiences. The press embargo lifts simultaneously with the platform launch: global and regional press coverage activates, journalist features publish, and the social campaign goes fully live across all platforms. Short clips already seeded through community networks drive traffic to the platform from day one. Partner organizations amplify the launch through their own channels using the localized toolkits distributed in Q1.

The platform launch is designed to build a wave of public momentum — reaching new audiences, generating press coverage, and creating the conditions of anticipation and investment that carry toward the anniversary convening. Every person who explores the platform, shares a clip, or reads a press feature in the weeks following the launch is being drawn toward the convening as the next chapter of the story.

Platform goes live	Press embargo lifts	Social campaign activates	Community amplification
Full interactive map, experiential layer, data stories, and community archive publicly accessible. Contribution portal onboarding begins.	Global and regional press features publish simultaneously. Platform cited as primary data and story reference. Journalist embeds activated.	Full short-form campaign live across Instagram, TikTok, YouTube, LinkedIn, and X. Clips drive traffic to platform. Rooting for Change content leads.	Community partners amplify through their own channels using Q1 toolkits. Stories begin flowing back to the platform from community networks worldwide.

The anniversary convening — The conversion moment (Q3/Q4 2027)

The anniversary convening is the cultural moment at the heart of *Rooted*, conceived as an encounter: part 10-year celebration, part mobilization, part living expression of everything the movement has built and everything it is working toward. By the time guests arrive, the platform is already live, the press has already covered the launch, and the campaign has

already reached global audiences. The key conversion moments are thus the debut of the celebratory film, and the immersive experience.

As this event is the main vehicle through which the immersive experience will debut, our consortium will provide event strategy and curation, as well as logistical support for the immersive experience.

Anniversary Convening — Sample Program Q3/Q4 2027	
Opening	Immersive experience opens Guests enter the installation before any formal programming begins — walking through the three rings of Rooted in Relation, Rooting for Change, and Roots of Abundance. Community consultants are present to guide and contextualise. The experience is the opening address. It is not a warm-up. It is the argument.
Film premiere	Director's cut screening The feature film premieres for donors and partners in its director's cut — a complete, powerful work that will continue into post-production refinement for the 2028 festival circuit. Followed by a conversation with filmmakers and community voices from the film.
Donor & partner sessions	Facilitated engagement programming Structured dialogue sessions for donors and partners follow immediately — timed to convert the emotional investment of the immersive experience and the film into concrete commitment. Policy dialogue sessions run in parallel for government and institutional audiences.
Community celebration	The movement convenes Community partners, movement leaders, and advocates from across the Tenure Facility's global network gather to celebrate the decade. Cultural programming, community-led performances, and shared recognition of collective achievement close the convening.
Simultaneous	Regional launch events Community partners around the world host regional launch events using the localized toolkits from Q1 — ensuring the convening's energy travels back to the communities whose stories made it possible.

Sustained rollout — Roots of Abundance (Post-convening 2027)

Following the convening, the campaign shifts into its sustained momentum phase organized around the third movement, Roots of Abundance. Content transitions from retrospective evidence to generative vision — what the movement is actively building, why it matters now, and what the next decade of secured tenure could produce for people, climate, and biodiversity. The community screening program guides are distributed, and the roll out

beings globally, with dedicated in-country and community budgets defined by the communities themselves supporting local activation in ways that are appropriate and self-determined. The platform's contribution portal opens fully, and partner organizations begin adding their own stories, data, and testimony to the living archive. The campaign is submitted for presentation at relevant global and regional conferences — land rights, climate, biodiversity, and international development — positioning Rooted as a model for movement communications.

Roots of Abundance content	Community screening program	Conference presentations
Social content calendar shifts to forward-looking, generative storytelling. Community visions of abundance, ecosystem recovery stories, and calls to action on a rolling thematic schedule.	Facilitated screening toolkit distributed globally. Communities define what meaningful activation looks like for their context. In-country budgets scoped separately in consultation with community partners.	Campaign submitted as a case study across land rights, climate, biodiversity, and development conferences — positioning Rooted as a model for participatory movement communications.

1.4.3 Post-event, 10-year celebration close out (Q4 2027 – 2028 & Beyond)

Content, stories, and experiences travel back to the communities whose lives they carry. The campaign's presence at regional conferences allows partner organizations to screen the film, demonstrate the platform, and share the campaign's outputs with regional audiences in contexts where the Tenure Facility and its partners are already present. The platform's experiential layer becomes a destination communities share within their own networks — extending the campaign's reach far beyond what any institutional distribution could achieve, and ensuring the movement carries Rooted forward long after the formal campaign timeline has closed.

Open access film release	Documentary festival circuit
Following its director's cut premiere and festival circuit journey, the feature film is made freely and openly available — through the platform and other open access channels — so the movement can carry it as far and wide as possible. No paywall, no gatekeeping. The film belongs to the movement.	The feature film is refined from its director's cut premiere into a fully finished festival print and submitted to the international and regional documentary festival circuit. Festival selections generate a second wave of global press coverage, new audience reach, and cultural credibility. <i>*outside of budgetary scope*</i>

Conference presentations

The campaign is submitted as a case study to global conferences across land rights, climate, biodiversity, communications, and data visualization — presenting its methodology, outputs, and impact as a model for movement communications and participatory storytelling at scale.

outside of budgetary scope

Awards submissions

The campaign and its individual components are submitted to relevant awards across documentary filmmaking, data visualization, interactive design, communications, and social impact — building the Tenure Facility's profile and the campaign's credibility as a landmark piece of movement infrastructure.

outside of budgetary scope

II. OUR APPROACH

How we work is inseparable from what we produce. The creative vision and the key outputs of this engagement are inherently tied to the mission of decolonial efforts by reclaiming and legitimizing Indigenous ways of knowing. Our proposal is directly inspired by [Naomi Terry's "Entangled Time Tree,"](#) which reimagines time not as a linear progression but as a baobab tree that is rooted in ancestral knowledge, branching into multiple possible futures from multiple simultaneous presents, with no single dominant perspective. It is a framework for holding many ways of knowing at once, where past, present, and future are porous, interconnected, and always in relation to each other. Holding this as our inspiration thus requires us to take a decolonial approach in all of our work, not just in the storytelling aspects. The basis for this approach is drawn from Linda Tuhiwai Smith's "[Decolonizing Methodologies: Research and Indigenous Peoples \(2021\)](#)," which centers Indigenous communities as the authors and owners of their own knowledge, prioritizes research that serves community-defined goals over external agendas, grounds methodology in relationality and reciprocity, and insists that the processes of gathering, interpreting, and sharing knowledge must themselves reflect the values and protocols of the communities they concern.

Thus, the project management and governance structures exist to hold this group accountable to the Tenure Facility, the Indigenous, Afrodescendent, and local communities, as well as to each other and our collective decolonial mission. Additionally, the monitoring and evaluation framework will be designed to measure not just outputs, but whether the process itself honors and benefits the communities at the center of it. In establishing these structures, our team will engage in critical self awareness practices to ensure our biases, positionality, and roles in systems of power do not reinforce neo-colonial hierarchies and ways of knowing.

2.1 Participatory Methods

Objectives: 3.1 — Demonstrate impact & amplify partners · 3.4 — Strengthen collective identity

Chaski Global and its consortium partners bring deep, sustained experience working alongside Indigenous Peoples, Afrodescendant Peoples, and local communities — not as service providers extracting content, but as collaborative partners committed to ensuring the communities whose stories this campaign carries are genuinely at its center. This commitment is reflected in how the work is structured, who is consulted and when, and how creative decisions are made throughout the production process.

Community consultation & co-creation protocols

Before any filming, data gathering, or platform design begins, Chaski and consortium partners will establish formal consultation and co-creation protocols in partnership with the Tenure Facility and its community networks. These protocols will define how communities are

engaged, how consent is sought and maintained, how creative decisions are shared, and how communities can withdraw participation at any stage without consequence. Protocols will be developed community by community, reflecting the different cultural, legal, and relational contexts of each territory.

Community consultants as creative authors

Community consultants from Indigenous, Afrodescendant, and local communities are embedded throughout the production process to serve as creative authors whose knowledge, judgment, and vision shape the work from the beginning. Rather than serving just as subjects, our process will place cameras and other collection tools in their hands. For the film, community consultants guide what is filmed, how it is framed, and what remains off camera. For the immersive experience, they guide the sensory, spiritual, and ecological dimensions of each ring. For the platform, they guide the experiential layer and the cultural protocols around how community territories are represented.

Working language & accessibility

All community-facing materials — consultation documents, consent frameworks, content packages, screening toolkits, and platform interfaces — are produced in the relevant local languages of each community partner. Translation and localization are treated as creative acts, not administrative tasks, and are carried out in collaboration with community members wherever possible.

Community-defined success

Alongside the campaign's quantitative metrics, Chaski will work with community partners to develop community-defined indicators of success — measures that reflect what the communities themselves consider meaningful outcomes of the project. These may include cultural indicators, relational indicators, and indicators of self-determination that formal evaluation frameworks would not capture. These indicators will be integrated into the M&E framework developed during the inception period.

Openness to consortium expansion

We welcome the possibility of expanding the consortium to include partners, vendors, or community organizations with whom the Tenure Facility has existing relationships and trust. We understand that the strongest work emerges from the strongest networks, and we are committed to building on the relationships the Tenure Facility has developed over a decade rather than replacing them. The creative brief itself will be confirmed in consultation with the Tenure Facility and its stakeholders — this proposal represents a starting point for a collaborative process, not a finished plan.

2.2 Project Management & Governance

Rooted is a complex, multi-partner, multi-deliverable project spanning two years and multiple geographies. Delivering it with the quality, integrity, and community-centeredness demands rigorous project management structures alongside the flexibility to respond to what emerges in the field. Chaski Global has extensive experience managing projects of comparable scope and complexity — including a six-year engagement with the Millennium Challenge Corporation spanning Sub-Saharan Africa, and sustained strategic communications partnerships with USAID across a multinational workforce in more than 100 countries, the IADB, and other international projects.

Project delivery will be coordinated through a central project management team, with dedicated leads across each core workstream: content production, platform development, and installation design. The Regional production partners and community consultants will be engaged in each location to support field production, translation, and review processes. Platform development and installation design will run concurrently with content production.

2.2.1 Consortium & Reporting Structure

Chaski Global serves as lead partner and primary point of accountability for the consortium. The lead relationship on the Tenure Facility side will be with the Chief Development Officer and Management Team, with regular coordination meetings and progress reporting as required. All consortium partners report to Chaski Global, which is responsible for consolidating updates, managing timelines, and escalating issues to the Tenure Facility as appropriate.

Reporting cadence	Key touchpoints	Escalation protocol
Monthly written progress reports to Tenure Facility CDO and Management Team	Inception meeting — workplan, timeline, and budget finalized collaboratively	Community consent issues escalated immediately to Tenure Facility CDO
Bi-weekly internal consortium coordination calls	Community consultation protocol sign-off	Budget variances above 10% flagged in advance with mitigation plan
Quarterly review meetings with Tenure Facility leadership	Creative brief confirmation with Tenure Facility and stakeholders	Timeline risks flagged at least one quarter in advance with contingency options
	Platform beta review with community and partner networks	
	Film cut review with community consultants	

Inception period

A formal inception period at the start of the engagement will be used to finalize the detailed workplan, timeline, and budget in close collaboration with the Tenure Facility and its community partners. The inception period is also when community consultation protocols are established, the creative brief is confirmed with stakeholder input, and the consortium structure is finalized — including any additional partners the Tenure Facility wishes to bring in. Nothing in this proposal is presented as fixed. The inception period is the moment it becomes genuinely collaborative.

Risk management

The primary risks for a project of this nature are community consent and co-creation risks, production timeline risks, and budget management risks across a multi-partner consortium. Chaski's approach to all three is proactive rather than reactive: consent protocols are established before production begins and maintained throughout; timeline risks are identified and flagged at least one quarter in advance; and budget management across consortium partners is tracked monthly against agreed line items, with variances reported transparently to the Tenure Facility.

III. EXPERIENCE OF THE CONSORTIUM

This consortium combines extensive experience in global strategic communications, digital platform development, and creative leadership across multimedia platforms. Individually, each key contributor demonstrates a proven commitment to Indigenous- and community-led processes and extensive experience working respectfully with Indigenous Peoples, Afrodescendant, and local communities. Collectively, these contributors have worked with communities in Latin America, Central America, Sub-Saharan Africa, Asia, and South-East Asia.

Chaski Global is a full service strategic communications and creative agency that partners with foundations, academia, the private sector, non-profits, and governments to help make the complex clear using the power of intentional design and data. They have experience implementing complex international communications projects and campaigns across a variety of sectors and geographies. Relevant projects are highlighted in the case studies section of the appendix. Chaski will be responsible for project management and implementation, and will supply their Principal and Communications Officer at a determined level of full time equivalency to create, implement, and manage this campaign in partnership with Tenure Facility. Key contributors will also include Chaski's Creative Directors for brand and graphic design as needed, and the Director of Events. Full resumes of contributors are included in the appendix. Chaski also maintains a global roster of photographers, videographers, and translators that could be mobilized for this project. Full resumes are included following this section.

Benjamin Keller is an architect of digital platforms and analytical systems for international development, specializing in sustainable energy, geospatial analytics, digital infrastructure, and interactive visualization. He has worked across the United Nations system to develop digital public goods and analytical and visualization tools that support governments and development institutions in strategic planning and policy for energy and climate transitions. He leads interdisciplinary initiatives spanning data science, software development, research, and communications, coordinating teams and partnerships across global programs. Relevant projects include working as the lead consultant for the [UNDP Sustainable Energy Digital Intelligence Platform](#); [UNFCCC Biennial Transparency Reports dashboard](#) and [Climate Visualization Engine](#); and the [UNDP Small Island Development States Data Platform](#). Full resume is included in the appendix.

Mitchell Tijerina is a data-driven storyteller passionate about ecological and cultural conservation using mixed research methods and multimedia to create cutting edge geovisualizations. He has proven expertise in GIS platform development, spatial data analysis, and transportation safety modeling, with recent work spanning Burgess & Niple, the United Nations Development Programme, a Fortune 500 REIT (NYSE: BRX), and a global public health NGO. Holds an MS in Geography with a GIS specialization from Ohio University and brings native fluency in English and Spanish, with field experience across Latin America, and the U.S. Equally at home leading technical GIS workflows and directing documentary film teams, with a

deep commitment to amplifying indigenous voices and driving evidence-based policymaking through cutting-edge geovisualization. Relevant projects include leading as a GIS Contractor for the [Uramba Bahia Malaga Living Atlas](#); [Sustainable Energy Geoportal](#); [The END Fund Visualizing Neglected Tropical Diseases](#); and [Mapping Africa's Clean Energy Transitions with CEEI](#). Full resume is included in the appendix.

Aesthetic Voyagers, LLC is the award-winning documentary team behind *La Gente de la Tierra* and will contribute to the production (pre/post) of the anniversary film (see selected examples of their work here: <https://chaskiglobal.vercel.app/our-films>). Through their documentary work that promotes global ecological and cultural conservation by presenting an intimate window into the lives of individuals and communities who have profound connections to the natural world, they encourage reflection on one's own relationship to the Earth. This work has led to lasting relationships with various indigenous communities and families across Peru such as the Shipibo of the Amazon, Quechua communities of the Sacred Valley, Aymara fisherman of Lake Titicaca, surfers of the Pacific Coast, and gold miners of the Rinconada. Recently in Colombia they expanded new and old relationships with various local and indigenous filmmakers and communities, such as the Wayuu in the Guajira, the Kogui in the Sierra Nevada de Santa Marta, intertidal Afro-Colombian surfer communities of Buenaventura, barefoot climbers in Chicamocha Canyon, and others; exploring what it means to maintain traditional relationships with the earth while navigating modern technologies/realities. See their award winning cut of *La Gente de la Tierra* - A 6-part series about earth connections of indigenous communities in Peru, [here](#) (PW: lagente) as well as a trailer for their upcoming work, *La Gente de la Magia*, a 6-part series about culture and environmentalism in Colombia, [here](#).

Sylvia Johnson will serve as the Immersive Experience Lead & Film Producer for the project. Sylvia is a filmmaker and impact strategist, and the Creative Director of Free Roaming Studios, a small production company dedicated to visual storytelling to inspire action. An American in the broadest sense of the word, she was born in Bolivia and raised in South, Central, and North America. Her work focuses on humanizing stories of conservation, injustice, and hope while inspiring strategic action towards change. With a background as a 3rd Culture Kid, she brings a unique transcultural perspective to everything she does. Sylvia's work has screened at film festivals around the world, US Congress, the Department of Interior, dozens of universities and civic institutions, museums such as SITE Santa Fe and the Rubin Center for the Visual Arts, and theatrically through Gathr Films. Sylvia started her career as a Fulbright Scholar with a project called Media Arts and Education for Social Change in Brazil. As a current National Geographic Explorer, she has created a project about marine plastic pollution in the Mexican Caribbean, and taught Storytelling for Conservation at Akagera National Park in Rwanda. Her newest exhibit, *Ser Animal (Animal Being)*, is a large-scale immersive storytelling installation that invites audiences to reconnect with their own wildness and reimagine our human relationship with the natural world. The project transforms public spaces into sensorial environments filled with the textures, sounds, and presence of biodiversity across the Americas. Using projected

video, spatialized sound, and participatory data visualization, the installation awakens emotional connections to climate resilience and biodiversity conservation while challenging how and where we engage with ecological storytelling. The project uses footage shot over the last 3 years in Costa Rica, projected onto 6 different screens hung throughout a black box studio space with surround sound audio to immerse viewers in the footage and ask them to reflect on what is still wild within us. It was covered in the Albuquerque Journal here:

Peter McFarren will serve as a strategic advisor for the creative outputs of the engagement. Peter McFarren is an international consultant, photographer, filmmaker, and social entrepreneur with more than forty years of experience leading cultural, museum, and creative-industry initiatives across Latin America, the Caribbean, the Middle East, Asia, the United States, and Africa. A citizen of Austria, the United States, and Bolivia, he has built a career at the intersection of cultural preservation, digital innovation, and community-based development. Peter founded the Quipus Foundation, which became Bolivia's largest private cultural institution, and led the development of two interactive children's museums through a pioneering debt-for-development swap supported by USAID and multiple international partners. As a filmmaker and media producer, Peter collaborated with National Geographic, the BBC, ABC, NBC, the History Channel, and Discovery. He oversaw Bolivian production for Marcel Ophuls' Oscar-winning documentary *Hotel Terminus* and co-produced *Amazonia*, an IMAX film nominated for an Academy Award.

Peter has extensive experience in digital-heritage and tourism platforms. At the Inter-American Development Bank, he led the creation of a GIS-based and 360° tourism platform, training programs for community museums, and cultural-innovation initiatives across the region. He later developed a strategic fundraising plan for the Grand Egyptian Museum, one of the world's largest cultural projects. His work includes the Amazon Museum (TAM), a global initiative featuring a multimedia portal and virtual galleries, and the Greek Museum of the Olive and Olive Oil in Crete, which blends cultural history with digital interpretation.

IV. PRICING PROPOSAL

The following budget reflects the confirmed scope of the Rooted campaign across 2026 and 2027. A detailed workplan, timeline, and budget breakdown by year will be finalized collaboratively with the Tenure Facility during the inception period. Cost-share arrangements noted below will be confirmed at that stage. Contingency is presented separately from the confirmed budget and is recommended as an additional reserve.

4.1 Budget

Line item	Scope & notes	Amount
Film production	Field producer/s ¹ , consortium footage & multiuse agreements, local videographers, post-production. Excludes travel for potential crew.	\$100,000
Campaign Asset Development & Creation	Includes strategy development, messaging, branding for Rooted campaign. 10 year anniversary sub-brand, and graphic design. Production of collateral items such as (but not limited to) social media & film assets, launch kits, templates, guides, etc.	\$20,000
Platform & map	GIS, interactive mapping, data visualization, experiential layer, platform development and launch support.	\$72,000
Immersive experience & fabrication	Artist fee, community consultants, projection equipment, installation build and rigging ²	\$100,000
Platform launch event & activation	Creative concept and production for the public platform launch — press activation, partner and community network coordination, social campaign go-live	\$23,000
Anniversary convening	Includes: programme design, film premiere technical setup, donor and partner engagement session design, on-site production support. Excludes: venue hire, catering, AV operations, travel and accommodation, logistical event management — collaborative with Tenure Facility. ³	\$40,000
Community consultation & co-creation	Travel, translation, consent protocol development, community consultant fees across all deliverables	\$38,000

Short-form content	Editing, optimization, localized content packages	\$20,000
Media engagement & PR	Press strategy, journalist outreach, embargo management at platform launch, regional media partnerships	\$27,000
Project management & consortium coordination	Chaski FTE staff (30% + 25% allocation across two years), consortium partner coordination and reporting.	\$60,000
Total confirmed budget		\$500,000

Recommended Contingency

Line item	Notes	Amount
Contingency reserve	Recommended 10% reserve for unforeseen production costs, community consent process extensions, or scope adjustments identified during inception. Presented separately from confirmed budget in line with the Tenure Facility's guidance on event-inclusive proposals.	\$50,000
Total with contingency		\$550,000

4.2 Notes

Cost-share arrangements

The following cost-share arrangements are proposed based on the collaborative approach outlined by the Tenure Facility. All arrangements and a final budget, timeline and proposal details will be formally confirmed during the inception period.

1. Field producer/s – The Tenure Facility's existing community relationships, regional networks, and on-the-ground knowledge represent a significant in-kind contribution to field production. A formal cost-share arrangement on field producer fees is recommended and will be confirmed during the inception period.

2. Immersive experience & fabrication — Venue hire for the installation is included in the Tenure Facility's event management contribution and is not costed within this line. The \$100,000 reflects Chaski's creative and production contribution to the installation itself.
3. Anniversary convening — This budget proposal does not include a full preliminary budget for the 10 year event. The quote here estimates costs for event strategy and coordination as it pertains to the launching of the immersive experience and the film. Full event management is a collaborative arrangement between Chaski Global and the Tenure Facility. Venue hire, catering, AV operations, travel and accommodation, logistical event management, attendee communications, event design & collateral, etc. sit outside the confirmed budget and scope of services, and will be managed collaboratively as outlined in the Tenure Facility's guidance.

Not Included in this Budget Estimate

Item	Notes
In-country & community screening budgets	Recommended as separate line items scoped in direct consultation with community partners. Communities should define what a meaningful screening program looks like for their context and what resources are required.
Documentary festival circuit	Submission fees, travel, and festival programming costs for the 2028 festival circuit are presented as suggested additional scope for negotiation beyond the confirmed budget.
Conference presentations & awards submissions	2028 and beyond conference presentation costs and awards submission fees are presented as suggested additional scope for negotiation.
Broadcast & open access distribution	Costs associated with open access film release infrastructure and any broadcast partnership arrangements are presented as suggested additional scope.
Items for purchase at cost	Travel arrangements, printing needs, etc. Will vary based on geography. Will confirm after inception.

V. APPENDIX

The appendix proceeds as follows:

5.1 Chaski Global Portfolio

5.2 Consortium Resumes

5.3 U.S. Small-Woman Owned Business Confirmation Letter

5.1 Chaski Global Portfolio

Experience

TerraNova / Global Land Alliance

Building the communications infrastructure to take a proven land rights model global.

Challenge

An estimated 1 million families in Brazil occupy privately owned land under threat of repossession. The Global Land Alliance had developed TerraNova—a tested, community-driven model to resolve these situations—but lacked the international communications infrastructure to attract the global partners and capital needed to scale. Chaski Global was engaged to build and execute a comprehensive international communications strategy, positioning TerraNova for a global audience of donors, impact investors, and multilateral institutions.

Process

Chaski developed a full communications plan encompassing audience mapping, message architecture, and a phased three-webinar series—leveraging COVID-era momentum around virtual convening. We translated complex land rights frameworks into accessible narratives, connecting field-level impact data to the policy and investment language that decision-makers respond to.

Campaign Results

- TerraNova recognized internationally as a model of public-private partnership success
- Model adopted and replicated in additional communities and countries
- New funders and impact investors engaged and converted
- Broad stakeholder ecosystem activated across five audience tiers

Strategic Outcomes

- Cohesive narrative platform ready for global deployment
- Tiered engagement pathway from awareness to action for each audience segment
- Multi-format content library supporting earned media and owned channels
- Partnership pipeline established with IADB, World Bank, and Bloomberg as convening hosts

Impact

The campaign activated a partnership pipeline with the IADB, World Bank, and Bloomberg as convening hosts — positioning TerraNova for replication across additional countries and opening pathways to new funders and impact investors globally.

Experience

USAID: Office of DEIA

Elevating inclusion through change management, evidence, and impact.

Challenge

With a multinational workforce in more than 100 countries, the newly launched Office of Diversity, Equity, Inclusion, and Accessibility (A/DEIA) in the U.S. Agency for International Development (USAID) works to ensure that the policies, programs, processes, partnerships, and people align with the core values of respect, empowerment, commitment to learning, and inclusion. The A/DEIA office came to us with the challenge to create a communications strategy that would bring to life the advancements they had made over the past two years.

Process

Chaski conducted various interviews, meetings, and retreats with members of the Communications team in the A/DEIA, as well as other communications stakeholders and Division Chiefs within the office. To support a new integrated communications strategy, Chaski conducted a situational analysis on DEIA in the United States and in the international development landscape and met with different stakeholders across the agency to obtain buy-in. To align the strategy with internal processes, Chaski created a content schedule that aligned with strategically derived themes.

Result

- Became trusted and integrated members of the USAID A/DEIA Communications team.
- Created talking points and speeches and wrote content for newsletters, blogs, social media, and agency wide announcements
- Designed collateral such as infographics, powerpoints, and graphics within USAID brand and sub-brand guidelines
- Created a process for event outreach and management
- Developed pre/post-production guides for team members in the field
- Produced short and long-form video content
- Conducted weekly media analysis for framing and situational awareness.

Impact

The comprehensive communication strategy developed by Chaski effectively amplified the visibility of A/DEIA's efforts, driving measurable change in organizational culture and enhancing USAID's global impact on diversity and inclusion initiatives.

Experience

Data Collaboratives for Local Impact

Leveraging data and design to improve lives in Côte d'Ivoire and Tanzania.

Challenge

The Millennium Challenge Corporation aimed to build a new model for delivering aid—one that would generate long-term, community-wide impact. Through the Data Collaboratives for Local Impact (DCLI), they set out to establish data and digital development infrastructure that prioritized women and youth. Chaski was brought in to provide full service strategic communications services for six years, including creating a compelling brand and website, and providing international event management services.

Process

Collaborating with U.S. government and in-country teams, we developed an optimistic brand identity for Sub-Saharan African and U.S. audiences. The Tanzania Data Lab (dLab) logo was created through a crowdsourcing competition. We balanced creativity and compliance, designing accessible and culturally sensitive materials within federal web standards. Additionally, we developed collateral and organized the Tanzania Data Tamasha, an international event to support storytelling and stakeholder engagement.

Result

- A culturally responsive website that reimagined traditional U.S. government aesthetics to foster cross-border engagement
- A cohesive brand suite including multi-use logos, report templates, office-space branding and large-format murals
- Unified messaging applied across podcasts, conferences, digital platforms, and print collateral
- Attendance from international and local stakeholders in Tanzania to a first-of-its-kind data fashion show

Impact

The launch of the Data Collaboratives for Local Impact website spotlighted success stories and toolkits from Tanzania in alignment with broader U.S. Government goals—contributing to the launch of a new collaborative in Côte d'Ivoire in partnership with Microsoft.

Experience

MCA Malawi

A national campaign for sustainable power generation.

Challenge

Consistent access to electricity can drastically change the health, wellbeing, and economic success for families. The Millennium Challenge Corporation, through their compact with the Government of Malawi, drastically expanded electric infrastructure and service to millions of Malawians in regions where less than 10% of the population had access to electricity. We worked with Millennium Challenge Corporation on their closeout communications plan that needed to demonstrate the breadth and impact of the investment, as well as communicate nuanced tariff reforms to the general public.

Process

We worked with Millennium Challenge Corporation staff and contractors across time zones to collaboratively design a communications plan for both Malawians and U.S. Government stakeholders. This involved creating audience segments, and specific tactics for each audience segment. Further, we ensured that we engaged with sector and technical specialists to convey complex details through creative communications.

Result

- A widespread communications plan surrounding the closeout of the USD \$350.7 million Millennium Challenge Corporation Malawi power compact that detailed impact using brochures, ads, videos, infographics, and coffee table books.
- A Presidential exhibit that engaged the President's office, several branches of the government, the U.S. embassy and civil society organizations to show all the results in one place.
- Designed and produced engaging materials including large billboards across the main highways across Malawi.

Impact

The campaign reached over 18 million Malawians and key U.S. stakeholders, translating complex infrastructure and tariff reforms into accessible messages. By showcasing the tangible benefits of electricity—improved health, education, and economic opportunity—the effort built public trust, celebrated MCC's \$350.7M investment, and reinforced long-term commitment to expanding energy access.

Experience

JSI: Data & Digital / CHISU

Transforming siloed projects into a unified communications presence for a global health leader.

Challenge

John Snow, Inc. (JSI) engaged Chaski on two separate projects spanning brand strategy and communications leadership. The first established a cohesive Data & Digital practice area brand across JSI's global enterprise. The second provided full communications support for CHISU (Country Health Information System in Ems and Data Use) during a critical period of global expansion.

Process

For **JSI's Data & Digital brand**, we developed a sub-brand within existing guidelines and collaborated with content experts to create standardized messaging that empowered staff across geographies and languages. We visualized the strategy through the socio-ecological model of health and produced an interactive presentation and three-part leadership video series to introduce the new direction.

For **CHISU**, Chaski served as a full communications partner during a one-year staffing gap. We led all external communications and social media, built a content calendar aligned with program priorities and global health moments, and worked closely with technical teams and country offices to translate complex health systems work into accessible narratives. We also developed scalable toolkits to support consistent storytelling across countries and partners.

Result

- A strategic messaging guide and sub-brand enabling **JSI** staff worldwide to consistently position the company's Data & Digital capabilities
- A three-part video series with **JSI** leadership articulating the organization's reimagined approach to technical assistance
- A comprehensive content calendar and metrics-driven communications system for **CHISU**
- Scalable communications toolkits enabling aligned storytelling across **CHISU's** global country offices

Impact

JSI's Data & Digital practice emerged with a unified identity that turned formerly siloed projects into a company-wide strategy. For CHISU, Chaski's engagement supported program launches in multiple new countries, strengthened funder and partner confidence, and left behind sustainable systems and a culture of performance-driven communications.

Experience

Wawa Huasi

“Rooted in Care. Growing with Purpose.”

Challenge

Despite years of meaningful work supporting children and protecting the environment in Sucre, Bolivia, Fundación Wawa Huasi lacked a unified visual identity that clearly communicated the scope and heart of its mission. The absence of a recognizable logo made it difficult to build trust, rally partners, and tell a cohesive story that connects their work across generations and ecosystems.

Process

We engaged deeply with the foundation’s team and community members to distill the essence of their work into a single visual identity. Through interviews, collaborative sketches, and message alignment, we identified three core pillars—children’s well-being, environmental stewardship, and intergenerational community building (Bosque Tanga Tanga)—and developed a logo that symbolically ties these elements together. Every shape and color was chosen to reflect the animals of the Valley of Sucre, the innocence and strength of childhood, and the iconic arches from where the museum stands and overlooks the city.

Result

The new logo is a vibrant, layered mark that reflects Wawa Huasi’s commitment to nurturing life in all its forms. It balances warmth and resilience, childhood and growth, tradition and vision. It is now used consistently across all communications—signage, donation campaigns—creating instant recognition and a sense of pride for the community it represents.

Impact

With a unified visual identity, Fundación Wawa Huasi now stands stronger in its mission. The new logo has helped increase visibility, attract new partners, and unify internal messaging around the foundation’s three core pillars. More importantly, it gives the children, families, and environmental stewards of Sucre a symbol they can rally behind—one that reflects a space to play by learning, resilience, and hope for a sustainable future.

Valeria McFarren
Founder & Principal

Valeria brings a wealth of expertise and a proven track record in delivering data-driven, strategic communications support. With more than twenty years of experience and a Master's in Corporate Communications, Valeria has successfully partnered with governmental, academic, and private sector organizations to drive impactful communications campaigns. She collaborates closely with clients to guide the development of publications, marketing assets, infographics, and data visualizations to ensure that each project is approached with a clear sense of purpose and direction. In partnership with our dedicated team, Valeria drives these initiatives forward, overseeing the creation of materials that not only convey information effectively but also inspire and engage our global audience.

Jillian Randolph

Communications Officer

Jillian is a seasoned researcher and communications strategist with a Master's in Public Health, bringing an analytical, evidence-driven perspective to every stage of the work. Jillian consistently seeks new ways to strengthen impact across audiences, blending research, writing, and data-driven insights to inform communication strategies. Her curiosity-driven mindset encourages experimentation with innovative storytelling approaches, pushing beyond conventional formats to foster deeper understanding and engagement. On the operations side, she also creates systems for project and budget management that are responsive to various client types and enable Chaski to support a wide range of impactful projects.

Lauren Worth

Creative Director

Lauren stands as a beacon of creativity and expertise by making the complex clear through design. With a career spanning 15 years, Lauren drives our graphic design and layout endeavors by managing a seamless journey from the initial stages of pre-production all the way through meticulous editing, comprehensive revisions, culminating in the unveiling of our creations through digital and print mediums. She balances innovation with practicality, ensuring that projects are not only aesthetically pleasing but also strategically aligned with communication goals. Her keen eye for detail will be a driving force in maintaining the highest quality standards across all outputs. Whether destined for print or digital release, Lauren's designs exude professionalism, brand consistency and visual coherence, capturing the essence of your organization, while captivating our audience to inspire action.

Elizabeth Pasquariello

Director of Event Production

Elizabeth brings unwavering dedication in planning, executing, and delivering purpose-driven events that leave a lasting impression. Elizabeth's attention to detail and strategic mindset brings communication initiatives to life through dynamic events. From conceptualization to execution, she charts a comprehensive roadmap, ensuring that every element of events resonates with the mission and objectives. Her adeptness in coordinating logistics, managing timelines, and anticipating potential challenges will ensure that our events unfold seamlessly, fostering an environment where attendees are engaged and inspired.

Professional Summary

Architect of digital platforms and analytical systems for international development, specializing in sustainable energy, geospatial analytics, digital infrastructure, and interactive visualization. Works across the United Nations system to develop digital public goods and analytical and visualization tools that support governments and development institutions in strategic planning and policy for energy and climate transitions. Leads interdisciplinary initiatives spanning data science, software development, research, and communications, coordinating teams and partnerships across global programs. In parallel, founder of a documentary film production company producing films with communities and partners exploring the human dimensions of environmental and social change.

Work Experience

United Nations Framework Convention on Climate Change

(Feb 2026 – Mar 2026)

Lead Consultant on Regional Climate Action Digital Platforms

Advanced the work of the UNFCCC Mitigation Team and the Regional Collaboration Centres through development of digital tools and dashboards presenting climate action progress and NDC reporting.

- Developed an interactive [Biennial Transparency Reports dashboard](#) visualizing national mitigation indicators and progress metrics, improving accessibility of climate reporting data for regional forums.
- Built a [visualization engine](#) supporting UNFCCC Climate Weeks dashboards with automated data updates and custom indicators aligned with the six pillars of the COP30 Action Agenda.
- Designed architecture and dataset processing for regional climate action dashboards integrating NDC reporting indicators, compilation of national geospatial data, and national mitigation datasets.

United Nations Development Program

(Feb 2021 – Feb 2026)

Sustainable Energy Hub (SEH) – Programme and Data Analyst

(Apr 2023 – Feb 2026)

Supported the UNDP SEH team especially in the pillars of digital intelligence and thought leadership to create data tools and knowledge products that advance the work on the ground by country offices and at the strategic level

- Led project management and technical development of the [UNDP Sustainable Energy Digital Intelligence Platform](#), a new UNDP flagship digital tool to advance sustainable energy for development
- Led development of an AI knowledge engine and network graph built on a compiled dataset of 2,000 energy policies, publications, and research resources through semantic search and interactive web visualizations
- Developed the [Energy Moonshot Tracker](#) methodology and data pipeline and coordinated with 100+ country offices in UNDP to track beneficiaries from the energy portfolio of 397 projects covering a USD 1.4B portfolio with 76.5M direct beneficiaries of energy access, productive use, and infrastructure services
- Project management and technical supervision for a team including 40 interns, 10 consultants, and 100+ volunteers working across the SEH on research, data, and communications
- Lead the development of the Sustainable Energy Academy, including 9 learning modules, 65 case studies, and 200+ graphics and charts, and a custom learning management system and automated data pipelines

- Coordinate communications and social media including the [Sustainable Energy Bulletin](#) and [campaigns](#) on thematic and regional strategies including on digital, gender, clean cooking, AI, hydrogen, IoT, and more
- Led UNDP partnerships with digital stakeholders including IBM and a consortium of partner universities supporting digital tools and learning, including supporting the Clean Energy Equity Index, High Resolution Energy Access, and Energy Access Forecasting initiatives for generating new geospatial data products

Small Island Developing States (SIDS) Team – *Programme and Data Analyst* (Feb 2021 – Mar 2023)

Supported in the implementation of the UNDP SIDS Offer through data science and communications support, especially through the development of the [SIDS Data Platform](#), a digital public good advancing data capacity for SIDS

- Front-end design and development for data visualizations on UNDP portfolio analytics, custom multidimensional vulnerability index, and country profiles, and automated data reports generation
- Developed machine learning models for imputation of country-level indicator datasets and a live web playground for training custom models in Azure based on user-specified hyperparameters
- Led the communications effort of the SIDS team including drafting bulletin and thematic reports, social media posts, and the drafting of a progress report on the implementation of the SIDS Offer
- Supported the SIDS Principal Advisor in managing development of a GIS data platform including spatial data infrastructure, automated pipelines, Mapbox visualization portal, and APIs.

Aesthetic Voyager Films – *Founder*

(July 2015 – Present)

Directed documentary films in collaboration with international NGOs focusing on environmental stewardship, education access, and community resilience across Latin America, Africa, and Asia.

- [La Gente de la Magia](#) (2027), Colombia - A 6-part series about culture and environmentalism in Colombia
- [La Gente de la Tierra](#) (2026), Peru - A 6-part series about earth connections of indigenous communities (Winner of Best Documentary Feature at the Weengushk International Film Festival and Best Documentary Short at the Quetzalcoatl Indigenous Film Festival)
- [The Sunflower Kids](#) (2023), Lesotho - A film about the role of digital libraries for advancing education
- [Humanitaria](#) (2017), Costa Rica - A film about a community and youth empowerment nonprofit in La Carpio
- Left Behind (2015), China - A film about the Left Behind children and a youth mentorship NGO

Global Good, Intellectual Ventures – *Global Development Technology Intern*

(Sep 2019 – July 2020)

Collaborated with the portfolio and strategy teams at a Gates Foundation-funded global development lab on a suite of technologies for food and water security in sub-Saharan Africa and Southeast Asia.

- Built a parametric geospatial agricultural model to analyze and visualize the spatial and market potentials for irrigation technologies based on customizable climate and socioeconomic parameters
- Published a [literature review](#) and agricultural risk map tool on remote sensing in water sustainability and agricultural toxin management

Upwork – *Freelance in Web Development, Data Visualization, Media Production*

(July 2018 – June 2022)

Completed 34 freelance projects in web development, graphic design, data science, and video production.

- Designed and developed custom websites for 8 small businesses using Wordpress and with custom Javascript data visualization tools and cloud architectures
- Graphic design work for several nonprofits, especially on reports for climate and indigenous policy issues
- Developed successful crowdfunding campaigns for NGOs including Future Stars (Lesotho), Surf Libre (Colombia), Fundacion Humanitaria (Costa Rica), and Rising Dragon School (China)
- Video production including with youth climate leaders at CoalitionWILD, music videos with the [Jed Moffitt trio](#) and [Charlie Burg](#), and several corporate and small business marketing videos

PATH – *Malaria Diagnostics Intern*

(Dec 2018 – Feb 2019)

Developed technical solutions for a genetic screening kit used for diagnosis and treatment of *P. vivax* malaria in medical clinics in Africa and South Asia related to pharmaceutical packaging and user-centered design

Microsoft AI for Earth – Product Development Intern (June 2018 – Dec 2018)

Worked with a machine learning team at Microsoft to prototype an [AI wildlife monitoring device](#) for conservation involving engineering a camera with machine learning on the edge, mobile app programming, and business development

MIT Enterprise Forum Northwest – Technology Forum Coordinator (Jan 2017 – Feb 2021)

Organized innovation forums in clean energy, food security, AI and automation, and other emerging technology areas

Farm 4.0 – Founder (Sep 2017 – Dec 2018)

Product development for a IoT hydroponic garden and prototype of an automated vertical farm for food scarce regions

Wolfram Research – Data Visualization Intern (July 2017 – Aug 2017)

Built a global development indicator visualization and mapping tool and interactive nonprofit database

Education

Tsinghua University, Beijing, China – ME in Data Science and Information Technology (2018 – 2019)

Graduate research titled ‘Machine Learning on Satellite Imagery for Groundwater Modeling’. Developed a machine learning model to improve groundwater mapping through satellite imagery of surface vegetation

University of Washington – MS in Technology Innovation (2017 – 2018)

Within the Global Innovation Exchange. Research focus on global development technologies, including projects on IoT hydroponic systems, ML-enabled camera trap for conservation, and an IoT women’s safety device

Arizona State University – MS in Global Technology and Development (2021 – 2023)

Within the School for the Future of Innovation in Society. Research focus on geospatial methods for mapping development technology potential, especially in food security and digital libraries for sub-Saharan Africa

Denison University – BS in Physics with Minors in Math, Music, and Geoscience (2012 – 2016)

Research on star formation modeling to explore chemical in stellar envelopes, and geologic field research on the evolution of groundwater resources in Nepal following the Gorkha earthquake

Publications

[Energy, Digital, and Anticorruption: AI and Digital Innovation for Governance in the Just Energy Transition](#) (2025)

[Tracking the UNDP Energy Moonshot](#) (2025)

[Advancing a Just Energy Transition in SIDS](#) (2024)

[The potential for aflatoxin predictive risk modelling in sub-Saharan Africa: a review](#) (2021)

[Predicting Groundwater Depth from Surface Features using AI and Satellite Imagery](#) (2019)

Skills

Programming & Data Science: Python, JavaScript, SQL, Pandas, NumPy, GeoPandas, BeautifulSoup

Geospatial: QGIS, ArcGIS, Mapbox GL JS, Leaflet

Data Visualization and Frontend: D3.js, ECharts, Plotly, React, HTML, CSS, Tableau, Flourish

AI & Development Tools: Azure OpenAI, OpenAI API, Git, Docker, Neo4j

Design & Media: Figma, Adobe Illustrator, Adobe Premiere Pro, Adobe After Effects, Canva

Mitchell Tijerina

[Linkedin](#)

614-867-8954

*A data-driven storyteller passionate about ecological and cultural conservation
using mixed research methods and multimedia to create cutting edge geovisualizations.*

Work Experience

Burgess & Niple - Geospatial Data Analyst

(Jan '25 - Present)

- Specializing in transportation planning, geospatial analysis, data management/analysis, and traffic safety, he has led data-driven initiatives ranging from statewide predictive safety models to local infrastructure prioritization efforts. His project portfolio includes multi-million-dollar, multi-year studies and targeted, high-impact local work, including Vision Zero initiatives like [Indianapolis Vision Zero](#), data rich [Transportation Safety Dashboards](#), modernizing & automating participatory [Field Collection Methods](#). He is creating a better tomorrow through expertise in roadway risk modeling, network segmentation, & spatial data integration while relying on experience developing scalable GIS workflows, analyzing multimodal safety data, & supporting planning & engineering teams with actionable insights.

United Nations Development Program | Sustainable Energy Hub -

Geospatial Platform Designer

(Dec '25 - Jun '26)

- Led a team designing, prototyping, and developing a [geospatial platform](#) for the UNDP Sustainable Energy Hub to support global energy access planning, integrating spatial analytics, customizable metrics, and scenario-based modeling tools for policymakers and international stakeholders. Created a public storymap "[Mapping Africa's Clean Energy Transition with the CEE](#)" for the Clean Energy Equity Index developed by UNDP and IBM.

The END Fund - Data Manager (Contractor)

(Oct '24 - Feb '26)

- Gathering, consolidating, cleaning data, & advising a small team developing a [custom geospatial visualization](#) narrative dashboard showing funding needs & status of 6 neglected tropical infectious diseases across 23 countries.

Brixmor Property Group (NYSE: BRX) - GIS Market Research Intern

(Jun '24 - Sept '24)

- Capstone Project-** [Analysis](#) of the influence of **drive-thrus** on **foot traffic patterns** in open air shopping centers, using **mobile device datasets**. Aggregated and matched databases with Python & machine learning [code](#).
- Completed opportunity & best fit analyses for various [brands](#), [markets](#), & [centers](#). Collaborated with business dev. manager on brochures highlighting [demographics](#), traffic counts, & other [metrics](#) to drive leasing revenue at the property level. Assisted in post-covid daypart shopping trend analysis & Machine Learning initiative.

Aesthetic Voyager [Films](#) - Founder, Co-Director

(2015 - Present)

- Founded production** media company & NGO "La Gente" (501c3 pending), to amplify & connect the voices of indigenous & environmental leaders of the Americas through participatory audio-visual storytelling.
- Coordinated and lead various 2-8 person teams:** film crew, community members, translators, sound designers, original music creators, post-production/distribution efforts, video editors, and art direction for animation team
- Freelance Video Editor, Production Assistant, Set Photographer, & Extra** with [Loose Films](#): [Poser](#) feature film (Tribeca Premiere), [My Life](#) music video, [MLG Call of Duty](#) tournaments, documentary *Bulldogs* (upcoming).

Ohio University - Teaching Assistant and Lab Instructor

(2022 - 2024)

- Lab Instructor** for: Remote Sensing, Cartography, Physical Geography, and Meteorology.

AmeriCorps Service Year with I Know I Can [NGO](#) - College Advisor

(2021 - 2022)

- Mentor & advisor** to Columbus City Schools students for their postsecondary pursuits (Middle, High, & College)
- Team lead** for service projects, Spanish college prep, social/emotional learning, financial literacy, & Justice Talks.

UI/UX Web Design - Front-End Web Design

(2019 - 2021)

- Head UX/UI designer for [Leverage](#) architecture company's cloud-based software platform "Fulcrum" ('20-'21)
- Web design for [Amazonian Hope NGO](#) and [Aesthetic Voyager Films](#) ('19-'21)

USGS - Geomorphological Visualization – Intern

(Jan 2018 - May 2018)

- Used Lidar, DGPS, and Landsat to analyze and **3D print landscape models** of coastal evolution of Fire Island, NY after Hurricane Sandy with Dr. Jennifer Miselis of the USGS at St. Petersburg Coastal and Marine Science Center.

Education

Ohio University - Geography MS, GIS specialization

(2022 - 2024)

- **Thesis Project:** *Interactive Geovisualization Platform for Collaborative Understanding between Policymakers and Locals on Shared National Park Land on the Pacific Coast of Colombia- Local TEK & Multimedia Geo-Viz for Conservation Territories*
- **Projects:** [GIS Tool](#) for finding Morel Mushrooms in National Parks. [Multivariate GeoSpatial Analysis](#) of the effect of Acid Mine Drainage Contamination in Ohio. [HTML Web Map Analysis](#) on factors influencing Police Violence in Colombia. [Multimedia Story Map](#): Gender, Environment, and Social Movements in Colombia.
- **Representative** for Graduate Student Senate ('22-'23) & **President/Founder** of Geography Club ('23)

Fulbright Scholar - Cauca University, Colombia - English Teaching Assistant

(2018 - 2019)

- **Created curriculum** and **taught/facilitated** classes for beginner through advanced English courses and events
- **Co-author/co-designer** and English editor of the University's Virtual English Program

Denison University - Geosciences BA, Minor in Spanish

(2014 - 2018)

- **Vice President** of CL Herrick Geological Society, **student leader** for field studies to Hawaii, Bahamas, ('15-'18)
- **Teaching Assistant** for Spanish ('17-'18) and Geosciences ('18) classes

Pontifical Catholic University of Peru (PUCP)- College of Art & Design, Semester Abroad

(2017)

Colegio Mayor del Cauca University- Virtual Course Design Certification

(2019)

Skills

Languages: English (Native Fluency), Spanish (Native Fluency), Portuguese (Intermediate), French (Beginner)

Programs/Misc: Python, HTML, CSS, SQL & Azure database (basic), JavaScript, ArcGIS Suite, QGIS, R, Adobe Suite, Microsoft Office Suite, TAS Analyst, Power BI (basic), Qualitative Research (NVIVO), Grant Writing, VR photo/video, Drone Pilot, API data integration with SOAP & REST servers, Figma, Excel Power Query

Awards & Grants

Aesthetic Voyager films: \$60,000 raised by **crowdfunding, direct contributions, & grants**

- Our Film [La Gente de la Tierra](#) "The People of the Earth" (Peru, 2021) **won two "Best Documentary Feature Film"** awards and was shown at **10 international film festivals**.
- [Humanitaria](#) (Short Film in Costa Rica, 2017) resulted in increased donations to our partner [NGO](#).
- *The Wind is Within You* (Documentary Mini Series in Colombia, *In Production now*)

Academic Research: Received Grants from the College of Arts & Sciences Research Grant & Geography Dept.

- Recipient of **College of Arts & Sciences Outstanding TA Award** (2024) & **Sindiga Memorial Fund** (2023)
- Thesis research **presented** at **GIS Day 2024, Three Minute Thesis OU**, and **Student Expo** (2022-24)
- **Panelist** for Environmental Studies Sustainability Film Series (2023)
- **Speaker** language & cultural workshops with **Fulbright Colombia, YMCA Colombia, & Popayán Universities**
- [SACNAS](#) conference **representative** for Denison University (2017)

5.3 U.S. Small-Woman Owned Business Confirmation Letter

Company Name: Chaski Global LLC
Certification Number: 710260
Small Certification Start Date: Aug 21, 2025
Micro Certification Start Date: Aug 21, 2025
Women Owned Certification Start Date: Aug 21, 2025
Minority Owned Certification Start Date: Aug 21, 2025
WOSB Certification Start Date: Aug 21, 2025
SWaM Certification Expiration Date: Aug 21, 2030

Dear Applicant,

We are pleased to inform you that your request for certification has been approved. Your company has been approved for the following designations:

Small, Micro, Women Owned, Minority Owned, WOSB

Your SWaM certification is valid for a term of five years from the date of your approval; re-certification is required at the end of that term.

You may log into your account to download a copy of your company's SWaM certificate as well as the SWaM-certified logo to use on marketing materials.

You will see your company listed as a certified vendor in our directory at <https://www.sbsd.virginia.gov/directory/>

It is very important that you keep your contact information up to date. Submit your changes electronically by logging into your account and updating the necessary information.

To do business with the Commonwealth of Virginia, you need to register your company with the eVA system, the state's online procurement system at <https://eva.virginia.gov> . All state solicitations are conducted on this site.

To check Procurement and Business Opportunities with state agencies, local governments, and others, please visit: <https://mvendor.cgieva.com/Vendor/public/AllOpportunities>

If you need assistance to operate your business, please visit this site: <https://bos.sbsd.virginia.gov/>

Sincerely,

Virginia Department of Small Business and Supplier Diversity
Certification Team

Thank you for your
consideration!
